Project

Customer Onboarding Modernization

Business Objective

The organization wants to modernize customer onboarding for retail and small business accounts. The current process is fragmented across manual forms, email approvals, identity checks, and back-office system entry. The goal is to reduce onboarding time, improve compliance, and provide an audit-ready workflow.

Business Goals

1. Reduce average onboarding completion time from 2 business days to under 30 minutes for standard cases.
2. Improve first-time-right completion rate by validating required information earlier in the process.
3. Ensure every onboarding case has a searchable audit trail.
4. Support both employee-assisted and customer-initiated onboarding.
5. Provide visibility into onboarding status and failure reasons.

In Scope

- customer onboarding request intake
- identity verification
- case creation and status tracking
- audit logging
- account creation after successful verification
- notification of onboarding outcome

Out of Scope

- loan origination
- fraud scoring model development
- production SSO integration
- international compliance rules outside the target region

Actors

- Customer
- Operations Analyst
- Compliance Officer
- Support Agent
- System Administrator

High-Level Requirements

- The system must capture customer identity details before account creation.
- Identity verification must complete before account activation.
- Cases must be searchable by request ID and customer ID.
- Operations users must be able to review failed onboarding cases.
- The system must record who performed each approval and when.
- The system must support retry when downstream verification times out.
- Account creation must not proceed if required KYC fields are missing.
- Every completed case must contain a final disposition status.

Business Rules

- A customer must be at least 18 years old to onboard.
- A valid government-issued ID is required.
- Cases with missing mandatory fields must not proceed to account creation.
- Manual review is required if identity confidence is below threshold.
- Audit logs must not be editable by standard operations users.

Risks / Concerns

- False rejects during identity verification could delay onboarding.
- Poor error handling may cause duplicate cases.
- Missing auditability could create compliance exposure.
