

Non-Functional and Security Requirements

Performance

- 95% of status lookup requests shall respond in under 3 seconds.
- 95% of onboarding start requests shall respond in under 5 seconds.
- The system shall support 500 concurrent active cases without service degradation in the demo assumptions.

Availability

- The system shall provide graceful fallback messaging when downstream verification is unavailable.
- Timeouts shall be logged and exposed to operations users with retry status.

Security

- All PII must be encrypted at rest.
- Access to audit logs shall be restricted to approved roles.
- API requests shall be authenticated in production design, even if the capstone uses a mock token approach.

Compliance

- Audit logs shall be retained for 7 years.
- Verification decisions must be traceable to request ID and actor.
- No standard operations user may modify historical audit entries.

Reliability

- Duplicate account creation must be prevented for the same approved request.
- Duplicate onboarding requests should be detectable when customer and document details match recent submissions.

Observability

- Failures must include error category and timestamp.
- Workflow transitions should be traceable for support and QA analysis.
